This PV plant would generate a revenue through the contracting via the , or LTAs in Mexico. Should electrical energy storage systems be used in long-term power auctions? As being generally technology-agnostic, the use of Electrical Energy Storage Systems (EESS) within the long-term power auctions was neither explicitly encouraged nor discouraged. This analysis assumes that the EESS, more specifically the BESS, would be part of a solar PV plant. What if LCoS was reduced 155 US\$/MWh? For thermal storage, the reduced LCOS of 155 US\$/MWh could not compensate for the reduction in revenue due to energy lost through the assumed thermal storage efficiency of 50%. This was true for the Pessimistic, Realistic and Optimistic case. Mexico's energy sector is currently undergoing a dynamic shift, driven by the integration of solar energy and energy storage solutions.
