How much does cobalt cost in ? For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in to about \$30,000 in . Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in . What is the Fastmarkets battery Cost Index? The Fastmarkets Battery Cost Index is an easy-to-use cost model for total cell costs, including cost breakdown of active anode material (AAM), cathode active material (CAM), separator, electrolyte, other materials, energy, labor and operational costs across multiple chemistries and geographies. Why did cobalt buy 6,000 tonnes of cobalt? Cobalt Holdings plans to acquire 6,000 tonnes of cobalt. Following their \$230M London Stock Exchange listing, this move secures a key cobalt reserve. With the DRC's export ban affecting prices, the decision reflects shifting industry dynamics. Why are cobalt prices consolidated? In the weeks following confirmation that the cobalt market will face an additional three months of no exports from the Democratic Republic of Congo (DRC), metal prices have consolidated as participants point to the future for bullish sentiment. For miners supplying the EV battery industry, the news remain negative: when pairing metals demand with prices in the supply chain, declines this year are brutal. The latest data based on EV registrations in over 110 countries show the sales weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it From the raw materials to battery-grade commodities used in EV batteries and electronics, as well as black mass and rare earths, we price the critical materials that are helping to build a more sustainable future. This includes benchmark prices for lithium and cobalt, two battery materials that Figure 1 presents the estimated cost for nickel manganese cobalt (NCM) 811 cells for a 10 gigawatt-hour per year production rate across four different countries. Figure 1 In the first quarter of , NCM 811 cell costs in China were estimated to be 101 dollars per kilowatt hour (kWh) and 110 The Fastmarkets Battery Cost Index is an easy-to-use cost model for total cell costs, including cost breakdown of active anode material (AAM), cathode active material (CAM), separator, electrolyte, other materials, energy, labor and operational costs across multiple chemistries and geographies. The Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy CHARTS: Nickel, cobalt, lithium price slump cuts For miners supplying the EV battery industry, the news remain negative: when pairing metals demand with prices in the supply chain, declines this year are brutal. Battery Raw Materials: Latest Prices, Market Trends & Insights Our team of senior analysts and price researchers provide battery raw material prices, forward-looking reports and analysis of the market conditions.
