Can small-scale solar-based energy projects work in Greece? The aim of this work is to conduct a techno-economic analysis for three different small-scale solar-based energy projects in Greece, namely CSP, CSP with PV, and PV, all coupled with an innovative long-duration energy storage solution. How much solar PV is installed in Greece? In 2018, the installed capacity of solar PV in Greece accounted for 1.4 GW; A national target under the EU Effort Sharing Decision to reduce greenhouse gas (GHG) emissions outside the EU-Emission Trading System by 4% by 2020. How is storage regulated in Greece in 2018? In 2018, the Greek Parliament also passed a thorough regulatory framework for storage. Large-scale storage are selected through a bidding process, with a total tendered power capacity of 1,000 MW and at least 2.6 GWh of storage capacity. How much solar capacity will Greece have in 2020? In 2018, 1.4 GW of new PV projects were connected to the grid, bringing the cumulative capacity to 5.5 GW. This was the best performance ever for the Greek solar sector. Still, it looks modest if you compare it with the expected performance of the market in which should bring online around 1.7 GW of solar capacity. How much solar energy is needed in Greece? Based on Table 5, the total peak demand in the non-interconnected islands accounts for 1.53 MW and this number represents the TAM in Greece for the three small scale solar solutions with Azelio's technology. As already mentioned, the SAM is defined by limitations of both the market and the specific service that is provided. Where can solar power be deployed in Greece? The Non-Interconnected Islands in Greece is a great location for deployment of solar plants coupled with energy storage, especially small scale plants to address the needs of some rather small islands, but also to overcome the challenges with land availability.

### Techno-economic Analysis of Small Scale Solar Power

The purpose of the thesis project is the techno-economic comparison of three different small scale solar power plants, namely CSP, CSP & PV, and PV integrated with long-duration thermal Energy storage is the real game changer in Greece During sunny days, PV contributes over 60%-70% of energy during midday. Considering that there is no storage available yet in Greece, it is only reasonable that we have these levels of Clean energy investment in Greece: Solar, wind and storage Major constraints remain in grid capacity and storage, but these gaps also create lucrative opportunities for integrated PV+storage projects, offshore wind developers, and Economic assessment of storage investment in Greece Under high storage volumes and high RES, the yearly variance of system marginal prices is huge, while the hourly variation of prices in an average day is very low: this is the opportunity for Cost benefit analysis of a photovoltaic-energy storage In addition, special emphasis is given in order to select the most cost-efficient energy storage configuration available. According to the results obtained for high and Curtailment, Greece Needs 7 GW of Energy Storage by 2020 The obvious solution is energy storage and the revised NECP is expected to provide visibility for more investments. Biskas said storage must reach 7 GW to 8 GW by 2020 The Greek PV market A support scheme for self-consumption PV systems (<10.8 kW) coupled with storage in the residential and small agricultural sectors commenced in May 2018.
